Compute that runs on rivers, not coal.

Corevalley delivers GPU compute powered by Nepal's hydroelectricity — near-zero carbon, low cost, and positioned at the edge of the world's fastest-growing AI markets.

~\$0.04

PER KWH HYDRO POWER

~0g

CARBON PER COMPUTE

~40ms

LATENCY TO MUMBAI

Built for training, fine-tuning, and batch / async AI workloads.

The story

The AI buildout is colliding with a power problem. Most compute runs on fossil-heavy grids at rising cost. Corevalley starts from the opposite premise: abundant, cheap, clean hydroelectric energy in the Himalayas, wired directly into the AI economies of South Asia.

WHAT WE ARE

GPU-as-a-Service and AI compute infrastructure. A platform, not a storefront.

WHERE WE SIT

Primary market India; Southeast Asia as a natural adjacency.

BEST FIT

Training, fine-tuning, batch and async pipelines — where green energy and cost win.

THE EDGE

Structural ESG advantage against fossil-powered regional grids.

The mark

The logo is a live terminal prompt. It signals exactly what we are — infrastructure for builders — and renders the brand in the language of the people who use it.

> corevalley_

COMPONENTS

Green prompt glyph >, the wordmark corevalley, trailing underscore, and a solid block cursor.

TYPEFACE

JetBrains Mono, weight 500. Always lowercase.

Clear space & sizing

Protect the mark with clear space equal to the cap-height of the wordmark on all sides. Never crowd it with other elements.

The logo consists of a green greater-than sign followed by the word 'corevalley' in a lowercase, sans-serif font, and a green underline at the end. The entire logo is centered within a large, light green dashed rectangular border, which illustrates the required clear space around the mark.

> corevalley_

MINIMUM SIZE

No smaller than 24px tall on screen, or 8mm in print, to keep the cursor legible.

THE CURSOR

In static media the cursor is solid. In motion it may blink at ~1s intervals.

On backgrounds

Carbon is the default ground. On light or green grounds, the wordmark switches to Carbon while the prompt and cursor hold the contrasting accent.

PREFERRED

Hydro green on Carbon. Maximum contrast, native to the brand.

AVOID

Placing the mark over busy photography or low-contrast mid-tones.

Palette

A disciplined dark-mode-first system. Carbon grounds everything; Hydro green carries energy and action.

Hydro

#4ADE80

Primary / accent / action

Hydro Dark

#16A34A

Hover / secondary green

Carbon

#05080D

Ground / background

Ink

#E8ECEF

Primary text on dark

Mute

#6B7280

Secondary / muted text

Using color

Restraint is the rule. Green is a signal, not a wash — reserve it for what matters.

- > Carbon dominates. Most surface area is dark ground.
- > Hydro green is for the prompt, cursor, links, key actions and single hero figures.
- > Hydro Dark handles hover and pressed states, or green-on-green layering.
- > Ink is default body text; Mute is for captions, labels and secondary detail.
- > Avoid large green fills behind body copy — it breaks the signal-not-wash principle.

ACCESSIBILITY

Hydro on Carbon and Ink on Carbon both clear WCAG AA for text. Never set Mute as body text on Carbon at small sizes — reserve it for labels.

Type system

DISPLAY / MONO — JETBRAINS
MONO

Aa Gg 09

Logo, code, data, labels, technical detail.

Weights 400 / 500 / 700.

BODY — MANROPE

Aa Gg 09

Headlines, paragraphs, marketing. Weights

300 – 800.

Headlines set tight.

Body copy stays light-weight and generously spaced — Manrope 300 at 1.6 line-height keeps long technical passages readable on dark ground.

```
$ corevalley deploy --region np-ktm-1 --gpu h200
```

The ridgeline

A dot-matrix Himalayan ridgeline is the brand's signature graphic device. It fuses two ideas — the mountains that hold the water, and the pixel grid of compute. Use it as a footer band, section break, or full-bleed backdrop at low opacity.

RULES

Render in Hydro green on Carbon. Dots fade with depth. Never stretch the aspect ratio or recolor into multiple hues — it is monochrome by design.

Voice & tone

We speak like infrastructure engineers, not marketers. Direct, technical, confident. We make claims we can defend and we don't oversell.

WE ARE

Precise · grounded · technical · honest
about constraints

WE ARE NOT

Hypey · vague · buzzword-driven ·
corporate-generic

SAY

"~40ms to Mumbai. Built for training and
async workloads."

NOT

"Blazing-fast, world-class AI for every
workload imaginable."

Quick rules

DO

Keep the mark lowercase, in JetBrains Mono 500, with the cursor intact.

DON'T

Capitalize, italicize, or swap the typeface of the wordmark.

DO

Default to Hydro green on Carbon ground.

DON'T

Place the logo on busy imagery or low-contrast mid-tones.

DO

Use green as a signal — sparingly and with intent.

DON'T

Flood layouts with green fills or recolor the ridgeline.
